A message from Mayor Becky Ames, April 21, 2020:

According to the CDC, Covid-19 is thought to spread mainly from person-to-person through respiratory droplets produced when an infected person coughs, sneezes, or talks. These droplets can land in the mouths or noses of people who are nearby or possibly be inhaled into the lungs. It is important to note that the CDC specifies that this spread is highly more likely when you are in close contact with one another, within 6 feet. That is why it is so important to maintain social distancing. Please continue to social distance from one another to slow the spread.

* The accuracy of the Status of COVID-Test is dependent upon the availability of data received from participating agencies and healthcare providers as well as when it was received with respect to; Total Tested, Pending Results and Negative.
